

Ground Granulated Blast Furnace Slag

This slag cement has been the most popular with concrete projects and can be used effectively to make concrete more strong. This cement gives better concrete, great finish, flexural strength, lower permeability, improved resistance plastic and hardened properties and lighter color to the structure.

Uses of GGBFS : This slag cement is widely used for concrete projects for providing strength to the Portland Cement.

Specific Gravity : 2.0 - 2.5% Solubility in Water : It reacts with water and produces cement properties.
